The background of the page is an abstract drawing. It features a grid of squares, each filled with a different color such as red, yellow, blue, green, orange, and purple. Overlaid on this grid is a network of thin, dark lines that intersect at various points, creating a complex, web-like pattern. The overall effect is a layered, geometric composition.

INTRODUCTION

In this assignment I will look at what the latest version of Autodesk Revit 2012 hardware requirements to run successfully. Included are several quotes for comparison, as well as why I chose the hardware I did.

REVIT HARDWARE REQUIREMENTS

I have decided that Autodesk Revit Architecture 2012 will run on a 64-Bit operating system. Below is a list of the hardware, as listed on the Autodesk website, required for everyday use of Revit 2012 as well as hardware needed to run big and complex models in Revit 2012.

Performance Recommendations for Everyday Use¹

- For Windows 7 64-bit or Windows Vista 64-bit: Intel Core i5-2300 quad-core processor (2.8 GHz, 6 MB cache) or equivalent AMD processor.
- For Windows XP Professional x64: Intel Pentium 4 or AMD Athlon dual core, 1.6 GHz (or higher) with SSE2 technology
- 8 GB RAM
- 5 GB free disk space
- 1,680 x 1,050 monitor with true color
- Display adapter capable of 24-bit color for basic graphics; 256 MB DirectX 10-capable graphics card with Shader Model 3 for advanced graphics

Performance Recommendations for Large/Complex Models

- Microsoft Windows 7 64-bit Enterprise, Ultimate, Professional, or Home Premium edition
- Intel Core i7-2600 quad-core processor (3.8 GHz, 8 MB cache) or

¹ Please see Appendix A: System Requirements

equivalent AMD processor

- 16 GB RAM (or more)
- 1,980 x 1,200 monitor with true color
- 2 GB (or more) DirectX 10-capable graphics card with Shader Model 3

For the purpose of this CAD-station I recommend the use of Windows 7 64bit operating system, as Windows is a very common operating system and in all likelihood is already the main operating system running in the office and on the office server.

The 64bit version of Windows is required to be able to address more than 3.25GB of RAM, which is required for this CAD-station.

HARDWARE SPECIFICATIONS

The processor or CPU required to run Revit 2012 needs to be a minimum of an Intel Core i5-2300 quad core for everyday use, but if the models become too big or complicated, this processor will not be adequate. The Intel Core i7-2600 quad core will be more suitable for architectural work, as most designs will become complicated and very detailed. This processor is one generation old, but the price/performance compared to the latest 3rd generation Core i7 chips (and the added costs of needing a latest-generation mother board) makes the Sandy Bridge the most efficient selection.²

The motherboard (MB) that I have decided to specify is a Z68 chipset motherboard. The Z68 supports Intel Socket 1155 the 2nd Generation Core i7. It also has extensive DDR3 memory support for most brands and speeds of memory. The motherboard supports SATA6GB/s connections for hard disk drives, which is beneficial as this is the latest, quickest connection, and will be used most frequently in future. The PCI Express ports on this MB support all current GPUs and should do so for several generations, which will allow for

² Please see Appendix B: CPU Comparisons

the upgrade of a GPU should this be required later. I chose this motherboard because, while it is one generation old and does not support the very latest CPUs, the price has been reduced substantially. It will be more than adequately capable of running this version of Revit and several upgrades to come.

The memory that I looked at is a 8GB DDR3 1333Mhz RAM, which will be supplied in two separate 4GB RAM to fit into two of the four provided slots on the motherboard. I chose a 1333Mhz RAM because, even though there is no real noticeable difference in use to the 1066Mhz RAM, I felt it better to have a faster capable RAM for future upgrades of Revit. If needed the RAM can be easily upgraded by adding two more 4GB RAM to the remaining slots on the motherboard, or changed completely if more than 16GB is required.

The hard drive (HDD) I have decided on is a 1TB capacity with 7200RPM and SATA6Gb/s support so that it will be compatible with the motherboard. I chose to use a 1TB HDD because of the large files that architects need to use on their computers as well as large programs that are used along with Revit. This way large renders, pictures, movies/fly throughs and files can be kept on the computer at the same time as running the programs required for everyday function.

The solid state drive (SSD) is a new technology and is very expensive at the moment, but I have decided to include this in my build as a second hard drive to run only Revit and the files being used by Revit. The SSD is substantially faster than the traditional HDD³, and will vastly improve the speed of operations needing to quickly read/write to a permanent storage device – i.e. rendering and loading large project files – and this will dramatically increase the speed at which Revit functions with the in house modeling, thus improving productivity of the user.

³ Please see Appendix C: HDD and SSD Comparisons

The graphics card (GPU) I am suggesting is a GeForce GTX560 Ti with 256bit memory bus width, and on-board memory of 1GB. I have decided to go with a gaming graphics card with perceived performance being almost as effective as a workstation graphics card, while costing a fraction of the price. A gaming graphics card is optimized for on the fly display rendering (i.e. in-house modeling), and as Revit does not use the graphics card for rendering final model images, it is more beneficial to having a graphics card that will support faster in-house modeling. A graphics card with more on board memory would require a wider bus than 256bits, which is a far more expensive prospect. For most in-house rendering, the specified 1GB card will be both performance and price efficient, but can be upgraded to a card with 2GB onboard memory if extensively detailed or massive models are needed, or future versions of Revit require this.

The power supply unit or PSU I will be looking at is a 500 watt or greater, to adequately meet the demand of a power-intensive CPU and GPU running at max capacity, with an efficiency rating of 80+, what this means is that the output must be 80% or more of the input of 500W, making it an efficient PSU and compensating for the high electrical requirements of the rest of the CAD-station.

The monitor specified is a 23-inch model, with full HD resolution. This size monitor is very common in the market at present, and therefore offers good value for relatively low cost. The native aspect ratio of a 23" monitor is 16:9, which is the most efficient and accurate for displaying full HD resolution.

MONITOR QUOTES

Incredible Connection and Hi-Fi Corporation are both nationwide stores but have online websites displaying item prices. I took the prices for the monitors off of each of the company's websites.

INCREDIBLECONNECTION.co.za⁹

Monitor	Samsung Syncmaster 23" 2333Tn 16ms 50,000:1 LCD	R 1 599,95
---------	--	------------

HIFICORP.co.za¹⁰

Monitor	Samsung 23" 16ms 50,000:1 LCD	R1 140,00
---------	----------------------------------	-----------

CHOSEN QUOTE

I have chosen the quote from www.lkonicIT.co.za for the CAD-station hardware and the quote for the monitor from Hi-Fi Corporation.

The completed computer and monitor price comes to R10 166,00

I have selected a quote for the computer from this one company because even though taking the best priced hardware parts from different companies would put the quotes at a slightly cheaper price by R56,02 the effort and cost it would take to pick up the parts from all the different stores would amount to more than the R56,02.

CONCLUSION

This is the most efficient and effective CAD-station based on price value and should be suitable for Revit needs for several years to come, at which point it should be sold second hand and an updated similar (not latest generation) CAD-station be built.

⁹ Please see Appendix H: Incredible Connection Quote

¹⁰ Please see Appendix I: Hi-Fi Corporation Quote
